STARS MODEL

A SITUATIONAL PERFORMANCE TOOL

Are you tired of the same old leadership tools?

Are you looking for something innovative that you can use in an instant?

Welcome to the STARS Model – Situational Performance tool.

The STARS Model is a Situational Performance model is a thought processor and action tool. It focuses on the human element and tactical situational reactions, sights and efforts on the decisions made to achieve an outstanding goal that takes you beyond the horizon of a critical situation performance.

The support this tool provides helps with frontline team connection (teams and boards) and positive outcomes, before during and after, at the same time keeping your emergency plans alive. It's added value of creating protocols or flushing out the after math of a critical situation.

This model brings your team together by collaborating and finding answers with you in the lead.

Don't be without this tool in your pocket. It's a leader's life saver!
